
Answers to Critical Thinking Case Studies

Chapter 8

Jaundice

1. Evidence: Yes, there are sufficient data to arrive at some possible conclusions.
2. Assumptions:
 - a. See text, [pp. 256-265](#).
 - b. Serum bilirubin levels are within acceptable limits. Based on the available data, the infant is within the low-intermediate risk zone, and ABO incompatibility–related hemolysis is not evident but may warrant further investigation.
 - c. Oral intake is adequate; urine and stool output is appropriate (based on urine output of one wet diaper per each day of life = five wets).
