

Reposition if head is hyperextended.

If child is not breathing, give rescue breathing and call EMS.

Keep child on side.

Remain with child.

Do not give food or liquids until child is fully alert and swallowing reflex has returned.

Look for medical identification and determine what factors occurred before onset of seizure that might have been triggers for seizure onset.

Check head and body for possible injuries.

Check inside of mouth to see if tongue or lips have been bitten.

Complex Partial Seizure

During the Seizure

Do not restrain the child's movements.

Remove harmful objects from area.

Redirect to safe area.

Talk in calm, reassuring manner.

Do not expect child to follow instructions.

Watch to see if seizure generalizes.

After the Seizure

Stay with child and reassure until fully conscious.

Call Emergency Medical Services

Call EMS if:
