

Occurs in five stages (may have significant variation in symptoms and their progression):

1. Within 6 hours (if child does not develop gastrointestinal symptoms in 6 hours, toxicity is unlikely)

- Vomiting
- Hematemesis
- Diarrhea
- Hematochezia (bloody stools)
- Abdominal pain
- Severe toxicity may have tachypnea, tachycardia, hypotension, coma

2. Latency period—up to 24 hours of apparent improvement

3. 12 to 24 hours

- Metabolic acidosis
- Fever
- Hyperglycemia
- Bleeding
- Seizures
