

Appearance of Lesions

Infantile Form

Erythema

Vesicles

Papules

Weeping

Oozing

Crusting

Scaling

Often symmetric

Childhood Form

Symmetric involvement

Clusters of small erythematous or flesh-colored papules or minimally scaling patches

Dry and may be hyperpigmented

Lichenification (thickened skin with accentuation of creases)

Keratosis pilaris (follicular hyperkeratosis) common

Adolescent or Adult Form

Same as childhood manifestations

Dry, thick lesions (lichenified plaques) common

Confluent papules

Other Physical Manifestations
